

WOODFOLD

DOOR INSTALLATION

DOOR SERIES: 140, 220

BULLETIN INSTALL140-120906

**Read and understand these instructions before proceeding!
It saves frustration!**

**Beginning installation before checking things out is discouraged!
Measure Twice - Cut Once so to speak**

1 PREPARATION

Preliminary Examination

Confirm the match of the packaged door to the intended opening. The example label to the right shows the location of the critical information.

Inspect the packaging. If the package was damaged when it arrived, contact the shipping carrier first, then notify Woodfold.

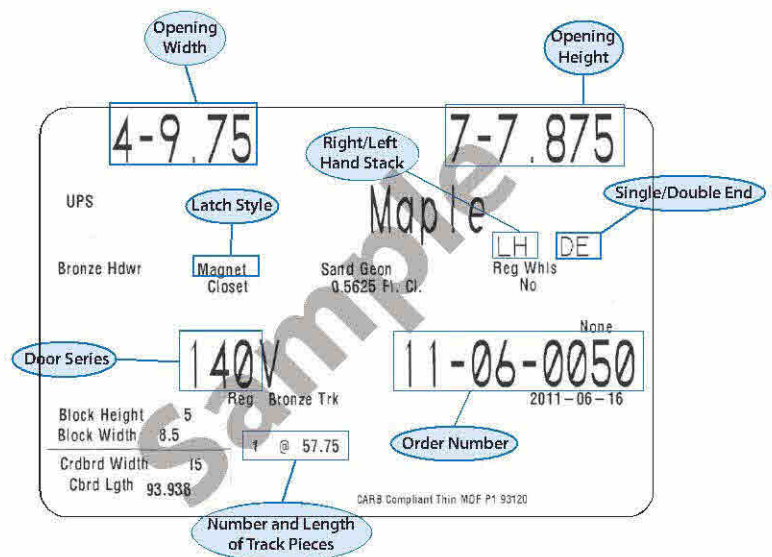

Lay out the contents on a flat surface near the opening where the door is to be installed.

The package(s) contents should include

- Door
- Track Section(s)
- Hardware packet (Screws etc.)
- These instructions (Yes, yes, we know you had to find them if you're reading them, but we like to be complete.)
- A copy of the shipping label with all the information you need if you have to call Woodfold for any reason. Hold on to it for future reference.

Example Label

Your label will look similar but have your unique information

Caution! The factory greased the track for smooth operation! Hands and tools can spread the grease all over, so please be careful.

Door Stacking: Double Ended (DE), Left Handed (LH), Right Handed (RH)

For the purpose of these instructions, doors come in three basic configurations: Double Ended (DE), Left Hand Stacked (LH) and Right Hand Stacked (RH). DE doors have Lead Panels (Panel with Swept Wing Handle) at each end of the Panel set. LH and RH doors have a Lead Panel on one end and a Mounting Panel on the other end. Left or Right handing is determined when the door is viewed from the front.

Even and Odd Door Panels

The factory puts in enough door panels to fill the opening. That seems obvious, but it means some doors have an even number of panels and others an odd number. The consequence is that the mounting panel on your door may point in the other direction than those shown in illustrations.

Power Screw Drivers: Check the length of your #2 Phillips Bit. It needs to extend at least 1¼" past the chuck. Any shorter and the chuck may tear up the track or the screw won't seat. It falls into the frustrating category when you have to ask Woodfold for a new track.

2 TRACK INSTALLATION

Track Screw

Dry fit the track in the opening. The correct length will just fit into the opening. If needed, trim the track with a hacksaw. Try to keep the metal filings from mixing with grease inside the track.

Contact Woodfold if the track is too short by more than ½".

Thread the track onto wheels; lineup the wheels properly in the track grooves. Be careful not to insert the wheels sideways. You won't like the result.

Confirm the proper orientation of the door. See the illustrations of Left or Right Stack or Double Ended doors above. Position the track to ensure: a) it can be securely attached to the header and b) the Mounting Panel can be securely attached to the wall or doorjamb.

Stack the door to one end of the track (either side of the opening is OK) and attach the other end of the track to the header. Use 1½" #8 pan head screws through the first 2 holes at the end of the track. Seat the head of the screw firmly against the track.

Caution! Firmly attach the track to the structural header!
Sheet rock and many decorative materials do not provide adequate support

If the screws didn't go into a solid part of the header (soft stuff like sheet rock or acoustical tile doesn't count) at least ¾", now would be a good time to go to the hardware store and get longer #8 Pan Head or Truss Head screws.

Transfer the door to the attached end of the track. Finish attaching the track with 1½" #8 Pan Head screws.

Check it out! Move the door back and forth along the track looking for smooth operation. Most frequent problems include screw heads sticking out, wheels sideways or debris in the track.

This next section is the most critical. Improperly installing the Mounting Panel results in the majority of trouble calls to Woodfold.

Repeat after me: **I will read this section. I will read this section.**

3. MOUNTING PANEL

If your door is a LH or RH stacked door or a pair (see Page 2) you need to read this Section.

If Your door is DE, forget the warning above and skip ahead to Section 4.

Push the door to the side that will be fastened permanently to the wall. Let the door form its own plumb (hang free) and carefully mark the wall with a pencil at the edge of the mounting panel near the top and bottom of the door.

It is important! Make the marks while the door is in its stacked position or the door will not close properly.

OK! Here comes the critical step. You just marked the wall at the top and bottom of the mounting panel edge with the door stacked. Now, extend the door to have access to the Mounting Panel. Hold the Mounting Panel edge at the pencil marks at both top and bottom!

Caution! Take care when attaching the Mounting Panel to the wall. As you unfold the door to insert the screws, the position of the Mounting Panel may move away from your marks. Sometimes, the marks look "off" when the door is extended.

Trust your marks!

Insert #6 x 1 1/2" flat head screws about 8" up from the floor and 8" down from the track.

Check it out! Can you see the pencil marks? If not, the door has shifted. If there is a gap between the edge and your marks, the door has shifted the other way. Stack the door against the Mounting Panel; it should form a neat, tight stack. **DON'T Force it.** If it binds, you missed your marks!

When the door stacks properly, re-extend it and install 2 more screws between the first 2, about equal distances apart.

4 MAGNETIC LATCH

Center the Strike Plate on the magnet with the adhesive side out. Remove the protective tape from the adhesive backing and push the door firmly shut.

When you reopen the door, the strike plate should stay, temporarily stuck, in position.

Screw down the strike plate using 1½" #6 Flat head screws.

Check it out! Open and close the door a few times then step back and admire your work.

Installation is complete!

5 UPKEEP AND CARE SUGGESTIONS

OK! Now the door is installed, let's review it's love and care.

Operation/Maintenance

- For proper operation the track must be securely attached to the header, plumb and level. Vertical jambs must be perpendicular for proper operation. Use instructions for proper installation
- Do not rapidly pull or force any folding door across openings or around corners
- The hinge system may be stiff initially and will gradually ease after a period of time with regular use
- During normal use of your Woodfold door watch for instances of binding during movement. If there is binding, inspect the track for loose screws, dirt, debris and wheel alignment.
- Track may be periodically lubricated with a petroleum jelly type material. Do not use aerosol lubricants

Care/Cleaning

- Avoid exposure to excess or continued moisture
- As with all materials, exposure to light will cause fading
- Regular cleaning of the Vinyl/Acrylic/Aluminum/Veneer- use mild soapy water then dry with a soft cloth or chamois. Do NOT use household cleaners, abrasive towels or scouring pads.
- Wood veneer doors can be treated periodically using a furniture polish/cleaner
- Acrylic/Aluminum panel doors can be treated periodically with non-abrasive anti-static cleaner to reduce dust accumulation

Thank you for purchasing a Woodfold door.
